

Purify Your Air,
Every Day
With *airify coat*

WALLHUB®

airify_{COAT}

Airify Coat is designed to be applied as a final layer over Terra texture paint, elevating your walls into **continuous air-purifying, anti-microbial surfaces**.

Ideal for both homes and commercial spaces, Airify Coat ensures your Terra-painted walls remain **clean, healthy, and long-lasting**.

Experience the next level of wall protection and air purification.

WALLHUB®

Developed in collaboration with SPECO

Certifications and Trust

Airify Coat, when combined with Terra Paint, has achieved international standards of **ISO 22000**, **WHO** and **HACCP** standards in inhibiting mould, bacteria and viruses' growth.

Key Benefits

Breathe Easy

Fresher Air, Healthier Living

Safe Living

Protection from Germs and Mould

Lesser Allergies

Cleaner air can help reduce respiratory issues and allergies

Long-Lasting

Lasts as Long as Your Terra Paint

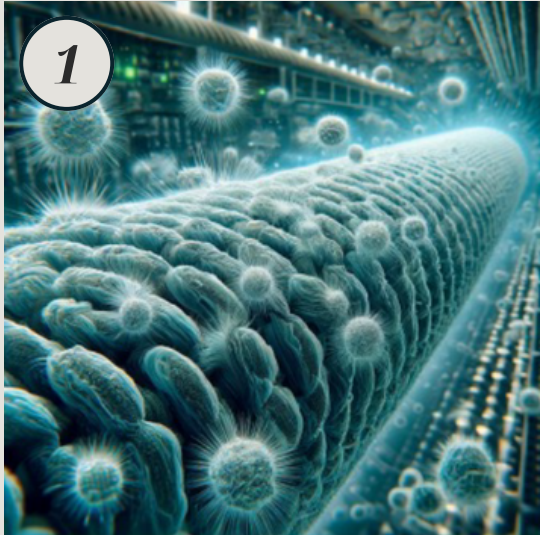

Eco-Friendly

Safe for You, Your Pets and the Planet

Airify coated walls with Terra Paint remained **10x cleaner** than untreated surfaces in accelerated bacteria growth tests.

WALLHUB®

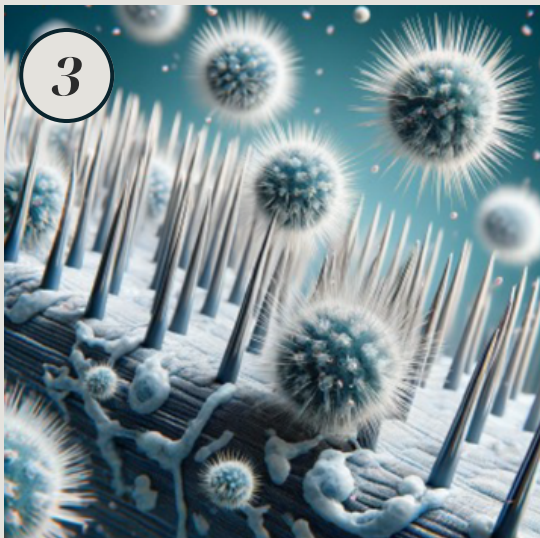

How It Works

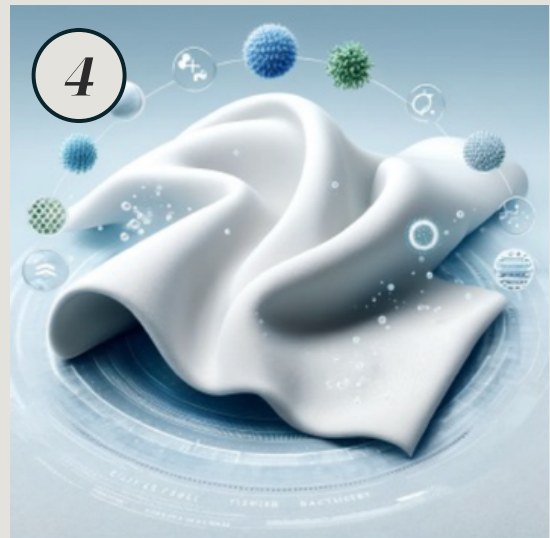

Airify Coat bonds to the surface of the material.

Bacteria are attracted to the treated surface.

Airify Coat punctures the bacteria's membrane, effectively destroying it.

As a result, the bacteria die, preventing odours and stains from forming.

How It Works

Airify Coat's nanotechnology reacts with water vapour in the air to produce **hydroxyl radicals**.

These hydroxyl radicals break down bad odours and harmful germs, purifying the air for a cleaner, healthier environment.

What are hydroxyl radicals?

Tiny, naturally occurring molecules found in the atmosphere.

They are known as "nature's detergent" because they react with various pollutants, breaking them down into harmless substances.

How It Works

Hydroxyl Radicals vs Negative Ions

Both technologies are widely used in air purification, but Hydroxyl Radicals deliver more comprehensive and effective results. Here's a comparison of their performance and functionality:

Feature	Hydroxyl Radicals	Negative Ions
Cleaning Power	Breaks down pollutants and germs at a molecular level	Makes particles fall to the ground
Health Benefits	Kills bacteria, viruses, and mould, improving air quality	Does not address microbial contamination
Residue	Leaves no harmful residues	Can leave particles on surfaces
Eco-Friendly	Naturally occurring and safe for the environment	No significant environmental impact

Unlike paints that use negative ions (causing pollutants to settle) or photocatalysis (which requires light), Airify Coat on Terra Paint uses hydroxyl radicals that actively and continuously neutralises contaminants at the molecular level, providing a more effective and comprehensive air-purification solution.

Your Solution for Continuous Air Purifying
